

Emanuel Suriano

I am a motivated, enthusiastic person, and passionate about new technologies. Always building side projects which allow me to always be up to date with the current stack in the field. I firmly believe in the Open Source philosophy, therefore I am a maintainer of some Open Source project, you can find them inside my GitHub profile. Also, I am keen to contribute to Open Source projects whenever I can because I think is the best to grow as a community.

WORK EXPERIENCE

2019-01-01 TILL TODAY

Senior Software Engineer - UI Platform at Omio:

Member of the UI Platform team. The main objective of this team is to ensure the quality of all the project inside the company. Therefore the communication and feedback with all the teams are crucial. In order to do that, we have created a set of tools that enforce a specific stack of technologies and conventions so all the teams will use the same tools to develop under the hood. The objective of this is to speed up the development process of new projects and provide an easy way to keep up to date current projects. Apart from developing this tool, we are: - Migrating current Android and iOS projects to React Native. - Maintaining the shared library of React and React Native components. - Enforcing best practices inside the company by tools or talks

2018-08-01 TILL 2019-01-01

Software Engineer - Booking Team at Omio:

Software developer, working currently with React, Typescript and Node JS. I'm part of the booking team, one of the most important flows of the application, therefore we have to communicate with several teams in order to ensure a successful Booking. The team is made up of 5 developers and a PO, and the methodology implemented is Kanban. Besides shipping new features, we need to make sure that they don't affect the users from buying inside the platform. For that, we define a CI process with several checks before a feature is merged, need to periodically check the tracking information of the application, set rotation cycles to be alerted in case something happened inside the application outside work time.

2018-03-01 TILL 2018-08-01

Web Development Team Lead at intive-FDV:

Leading a team of React Web Developers and ensuring development practices and processes are efficient. Technologies: - ReactJS - Redux - SASS - Jest - Reselect - Enzyme - StoryBook - Lerna - Webpack - Rollup
